Introduction

In a survey for *OpenDOAR* in early 2006, Peter Millington discovered that about two thirds of Open Access repositories did not have publicly stated policies for the permitted re-use of deposited items or for such things as submission of items, long term preservation, etc. This complicates matters for organisations wishing to provide search services, which in turn reduces the visibility and impact of these repositories.

Purpose of this Tool

To improve the situation, *OpenDOAR* has created this simple tool to help repository administrators to formulate and/or present their repository's policies. It provides a series of check boxes and pick lists for all the key policy options, which can be very quickly selected.

We have even provided recommended options for minimum compliance with the aims of the Open Access movement, and for optimising usage of your repository. For example, the minimum policy recommends allowing re-use of metadata for not-for-profit purposes, but prohibits commercial re-use. On the other hand, the optimum policy also allows free commercial re-use because the extra exposure this gives to your material probably outweighs any disadvantages.
